## Question Of The Week

### May 27, 2019

**Dear Valued Customer ,**

**For a special message from Joyce and me, please click [HERE](#).**

While you're looking at our special message, why not sign up for our blog email, if you haven't done so already! There are always changes in the computing world and you can find out about them by reading my blog posts. Six times a week, I write about important computing "stuff" and there are plenty of "How To" articles, as well. It's a free computer education!

For those of you on Florida's Treasure Coast, our June seminar is this coming Saturday. Get all the details below.

**REMINDER: Microsoft and/or Apple will NEVER call you out of the blue, they will NEVER cause a window to appear on your device warning you that it's infected and that you should not turn it off or you'll lose everything. These are SCAMS.**

Have a terrific week! Please call right away if you want the laptop deal listed

above.

John

---

**Summer hours start tomorrow. Find out what they are by clicking [HOURS](#).**

---

### **LAST CHANCE**

This will be the last chance to get this laptop and I only have three coming in. If you didn't order one last week, please consider this now. This is especially true if you have Windows 7 and know that your time is almost up for using that operating system.

**This is a 15.6" HP laptop, 1TB hard drive, 8GB RAM, DVD/CD Writer, Touchscreen, 11.45 battery run time. On sale for \$475.00 If you want one, please call us at 772-408-4425 as soon as possible. (Leave a message if we're closed - I'll call you back.)**

**Setup is \$104.95 when you purchase from us.**

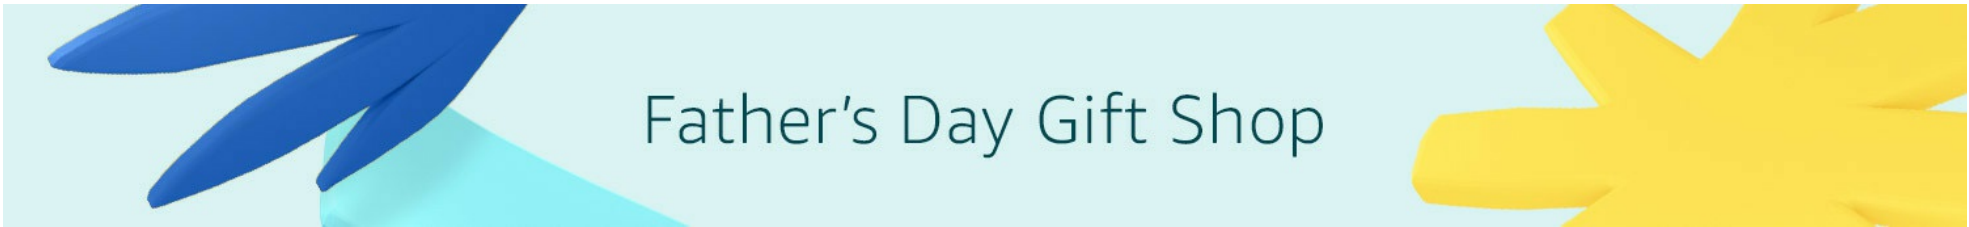

### **Next Seminar**

**If you live on the Treasure Coast, our next seminar is THIS Saturday, June 1, 2019.** The seminar title is "A Really Big Shoe" and it will be from 10:00 a.m.-12 Noon. The cost is still \$8 per person. This will be our last seminar before summer break so Joyce will be making hot breakfast casseroles! Come a little early for coffee, juice, donuts and other goodies, too. No need to register ahead of time, just come join us! You may bring your laptop or tablet if you like but they are not necessary for the class. Our seminar will be held in the Fellowship Hall of [Trinity United Methodist Church, 2221 NE Savannah Rd., Jensen Beach, FL 34957](#)

(Click on the church name for directions.)

# Question of the Week

**For this week, I'm going to answer 5 questions instead of just one! Enjoy!**

**Question 1:**

"I read in your blog about Yahoo disposable email addresses. Are there other services that offer throwaway email addresses?"

**Answer 1:**

Yes, there are and I'm going to cover several other options in upcoming blog posts - including one this week. Be sure to sign up for our blog email by clicking [HERE](#).

**Question 2:**

"When is the new version of Windows 10 coming out? Wasn't it due in April?"

**Answer 2:**

Yes, it was due in April but it was delayed while Microsoft fixed some issues. However, the latest version of Windows 10 - version 1903 is out now! We've already installed it on several of our machines. Microsoft will begin pushing it out to computers currently in use this week. Also later this week, we'll be blogging about some of the new features in this version of Windows 10. Be sure to sign up for our blog email by clicking [HERE](#).

**Question 3:**

"I understand that support for Windows 7 ends in just 7 months. Can't I just upgrade my computer to Windows 10 instead of having to purchase a new computer?"

**Answer 3:**

If your Windows 7 computer is three (3) years old or older, I don't recommend you upgrade it. First, most statistical reports on computer lifespan agree that laptops generally last about 3 1/2 years while desktops and all-in-ones hold on for about 5 years. With this in mind, I always caution people to not sink more than \$50 into a computer that is close to those lifespan numbers. Plus, a computer that is 3+ years old doesn't have the newest processor and memory types which are manufactured with Windows 10 in mind. So, even if it was worth upgrading, you'd probably be unhappy with the computer's speed and performance as upgrading will most likely slow it down considerably. In my book, it's just not sensible to consider upgrading a Windows 7 machine that is 3 years old or older. Don't forget, we always have great deals on new computers so be sure to check with us before you buy (like the one featured above).

**Question 4:**

"Is there a new version of Mac OS for computers?"

**Answer 4:**

Generally, Apple announces new versions of the Mac OS in June. This year, we expect them to announce Mac OS 10.15. We don't know its name yet and Apple isn't telling us much about it. However, we do know that Apple is working towards cross-platform apps. In other words, an app you can put on your iPhone or iPad will also work on your iMac. Look for more information sometime in June after Apple makes its announcement.

**Question 5:**

"My Vipre anti-virus subscription is almost up. Are you still recommending Vipre? Should I renew it?"

**Answer 5:**

We continue to recommend Vipre. We still feel it is the best anti-virus available. Of course, we continue to test other anti-virus software but Vipre still is at the top of our list. The good news for Mac computer owners is that Vipre is now available for your device. If you don't use Vipre, please consider changing over when your current anti-virus software subscription is up. Feel free to log-in to us using [Remote Technical Support](#) and we'll help you remove the old anti-virus and install Vipre.
